

Product Requirements Document (PRD): Car Listing Platform

1. Project Overview

Objective: Develop a robust, user-friendly car listing platform featuring a public-facing website with advanced filtering and an administrative backend for inventory and traffic management. **Supported Languages:** English (EN), Arabic (AR), and Kurdish (KU).

2. Frontend Requirements

2.1 Global Elements

- **Header Navigation:**
 - Company Logo.
 - Mobile phone number.
 - Language Switcher (EN, AR, KU).
 - Theme Toggle (Light Mode / Dark Mode).
- **Footer:**
 - Company Logo.
 - Company Information (About, Address, Contact).
 - Social Media Links.

2.2 Home Page

- **Advanced Search & Filter Bar:** Modeled after the functionality of `iqcars.net`, allowing users to quickly filter vehicles by parameters like make, model, year, and price.
- **Car Feed/Grid:** Displays available vehicles in an intuitive card format.
- **Pagination:** A "Load More" button to fetch and display additional car cards dynamically without refreshing the page.

2.3 Car Details Page

- **Layout & Functionality:** Modeled after `iqcars.net` to provide comprehensive vehicle information.
 - **Features:** Image gallery, key vehicle specifications (mileage, transmission, fuel type, etc.), pricing details, and a clear call-to-action to contact the seller.
-

3. Non-Functional Requirements

- **Search Engine Optimization (SEO):** Implementation of optimized meta tags, clean URL structures, and fast-loading architecture to ensure high visibility on search engines.
- **Responsive Design:** The website will automatically adapt for flawless performance across mobile phones, tablets, and desktop computers.
